Site #3 was observed to have a lush perimeter of Arrowhead, Pickerelweed and Club Rush. Fragrant Water Lily will continue to be monitored and managed accordingly.

# Site: 8

Comments:

Site #8 is well maintained. Perimeter Golden Canna and Club Rush are flourishing. A proper buffer in between the shoreline and the beneficial growth was also noted.

# Site: 7

Site #7 shows that current treatments are yielding successful results. Will continue to monitor and treat accordingly for invasive vegetative growth in between native beneficial plants. Notorious plant offenders include Air Potato (vine) and Torpedograss.

Site: 31

Comments:

Site #31 hosts an abundance of Club Rush both around the perimeter as well as the littoral shelf. Monitoring as well as necessary treatments during upcoming maintenance visits will continue.

**Site:** 33

Site #33 overall looks great. Shoreline vegetation is well maintained. Minimal shoreline algae was observed and will be targeted for treatment during the next routine maintenance visit.

Site: 29

Site #29 has spot treatments in progress for Torpedograss and Sedge. Technicians will take caution when spraying around beneficial vegetation in order to avoid collateral damage.

# **Site:** 30

Site #30 was observed to also have selective treatments in progress. The main target being Torpedograss previously thriving among the Pickerelweed and Club Rush.

# Site: 26

Successful results from minimal Torpedograss treatments were evident on the South side of the pond.

# **Site:** 25

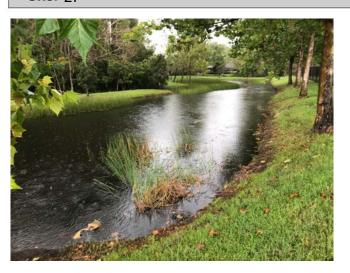

Site #25 is looking good! We will continue to promote prorogation of Club Rush and Arrowhead around the shorelines.

# Site: 27

Site #27 continues to maintain a healthy ecosystem. Again, we will continue to responsibly encourage growth of Club Rush around the perimeter.

# Management Summary

August 2020 marks the initial month of treatment for Steadfast Environmental within the Ballantrae community. As stewards of your ponds our goal is to always meet and of course exceed customer expectations. Each month the waterway report will feature 10 different ponds with photographic documentation and an explanation of how each is being maintained. The Management Summary section will elaborate on those treatment procedures as well as include information on treatments for ponds that may appear on later reports.

Minimal algal activity was observed during the on-site inspection. Any growth noted was inhabiting shallow areas of the ponds in between the shoreline and the beneficial growth of Club Rush or Pickerelweed/Arrowhead. This is a normal occurrence given the summer months provide increases in temperature as well sunlight which allow for amplified growth of algal species. Treatments are consistently in progress for algae in these areas and will continue to be monitored and maintained accordingly.

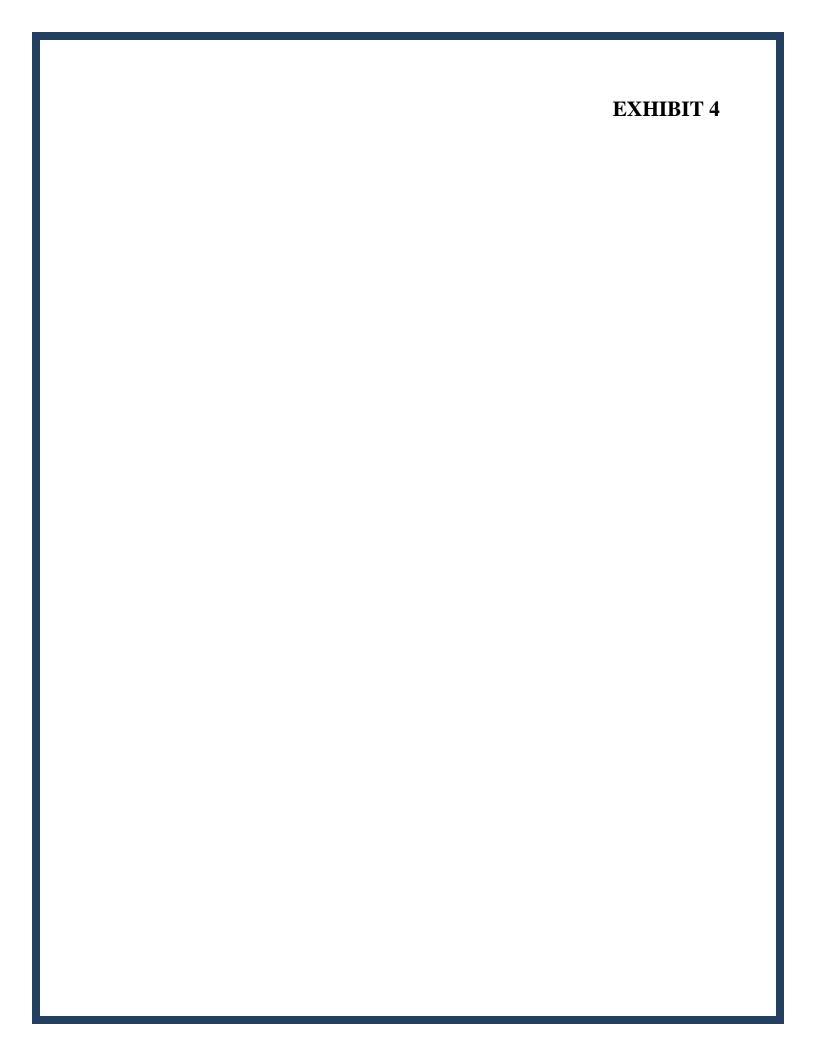

Although not featured photographically on the report, treatments are currently in progress for Hydrilla on pond #15. Moderate growth was observed during the initial maintenance visit to Ballantrae. Results from treatment typically occur within 7-10 days of the treatment date. Further monitoring as well as necessary treatments will continue.

Torpedograss treatments are currently in progress for sites #3, #7, #25, #26, #29, #30 & #33. Technicians have to be cautious when spot spraying these grasses as they tend inhabit beneficial shoreline plants such as Club Rush, Arrowhead and Pickerelweed. Selective herbicides can be used to provide specialty treatments what specifically target grasses without collateral damage to the desired vegetation. Should any vine growth within the beneficial plants become too dense to treat via herbicide, we prefer to pull vines by hand from shoreline areas.

### Recommendations / Action Items

- Continue to monitor and treat minimal shoreline algae.
- -Spot spray/specialty treat Torpedograss within beneficial plants.
- -Responsibly promote propagation of Club Rush.
- -Monitor recently treated Hydrilla on pond #15.

Thank you for choosing Steadfast Environmental as your waterway services vendor!

Comments:

Site #11 is well maintained. Targets for August include Sesbania, Torpedograss and Ceasarweed.

#### **Site:** 13

Site #13 is currently in progress of significant Dogfennel treatment. Success with our initial treatment is already evident. We will remain vigilant with future treatments to better control the growth.

Site #7 looks great, no recommendations.

#### Site: 8

Treatment for Torpedograss, Brazilian Pepper and Dogfennel will be required during future maintenance visits.

A significant reduction of Dogfennel, Ceasarweed and Torpedograss was accomplished during the August maintenance visits.

### Site: 4

Site #4 looks great, no recommendations.

Site #5 was also observed to be well maintained.

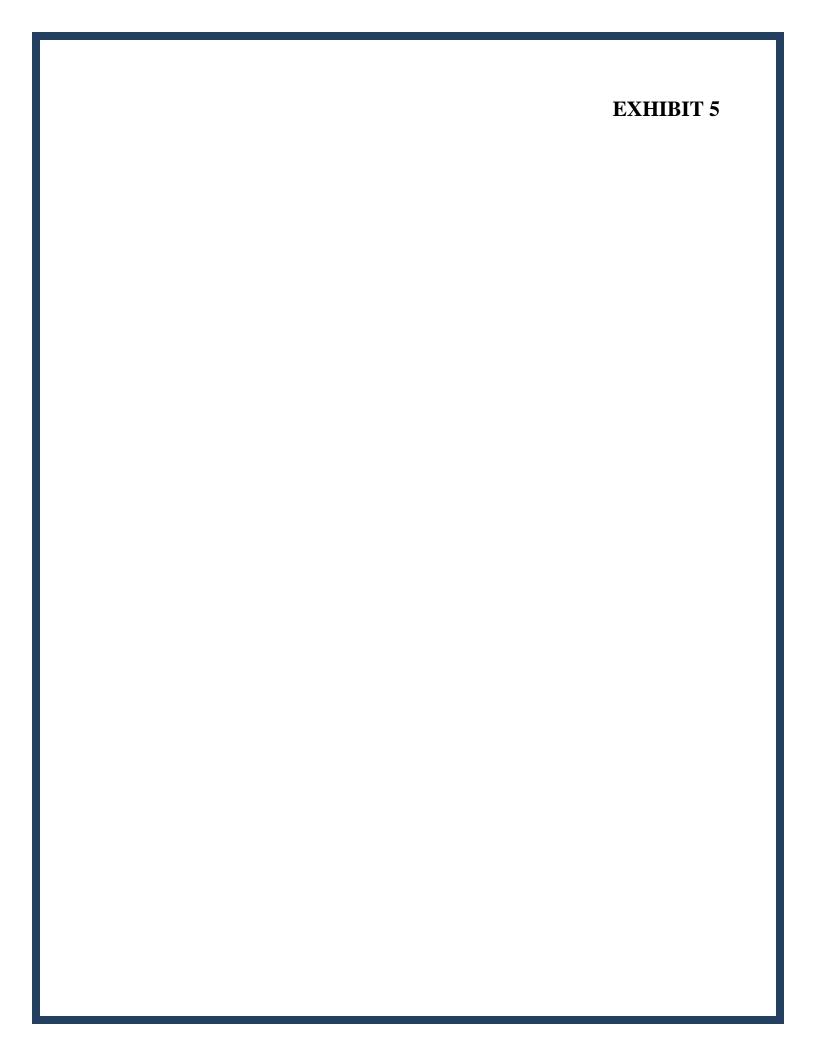

#### Management Summary

Conservation areas within the Ballantrae community are continuing to undergo routine maintenance for invasive vegetation encroaching from the jurisdictional wetland boundary to the maintained sod edge of the Landscape territory. Alternate herbicides are utilized to better kill in place and avoid collateral damage among desired vegetation species.

It is the ultimate objective to eventually reach the point where low lying native vegetation will be the sole inhabitant of the conservation buffer. These plants will include Swamp Fern, Cordgrass and any native aquatic species that will adapt to the environmental conditions.

#### Recommendations / Action Items

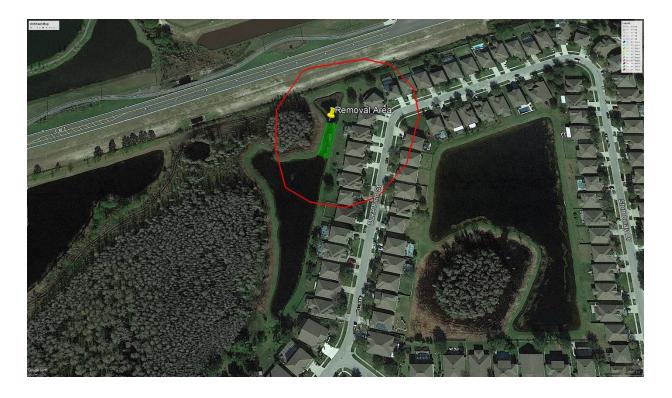

- Continue to control and maintain invasive vegetation.
- -Promote native beneficial low lying growth.

Club Rush growth within pond #15 has been a topic of resident questions. As your Aquatic and Conservation service provider, it is our due diligence to ensure that we properly observe and diagnose best management practices in addition to providing you with solutions to these issues.

It is our recommendation that 3400 square feet of the Club Rush be removed to better manage the growth and propagation around the waterway. There is a small channel that connects two larger portions of the waterway, it is important for functionality purposes that this remain more open for flow than it's current state would show.

Following the removal, this area must be targeted with herbicide treatments to prevent future takeovers of this magnitude.

Additional cost to District; None

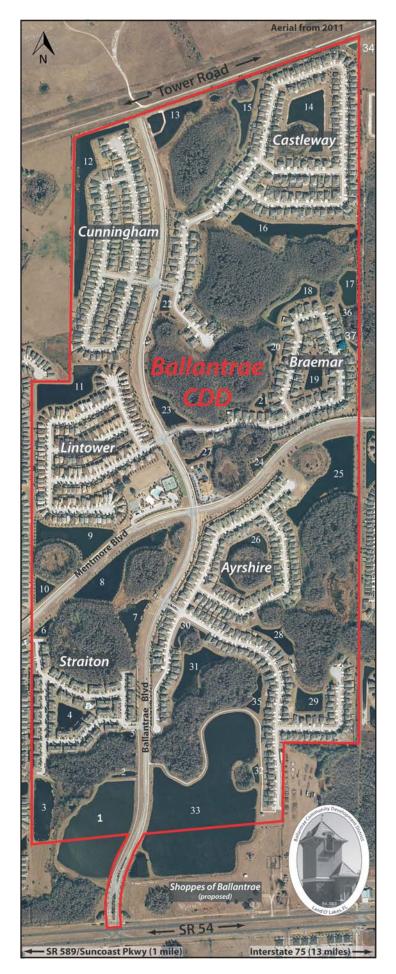

Regarding pond #26, residents have complained that Club Rush is propagating too far along the Conservation side of the pond. We suggest this encroachment be managed by herbicide treatment to remove half of the 11,000 square feet indicated on the map below on the conservation side of the pond. There is no concern about erosion of the pond bank along the "wild" or conservation side of the pond. In addition to the treatment of Club Rush along the wild side, on-site technicians will also target invasive Torpedograss growth as well as Brazilian Pepper growth that is found encroaching into open water.

Additional cost to District; None
